Integrating Iridium Certus™ 9704 with AWS IoT Core

Rapid AWS IoT Integration: From zero to live back-end in minutes, not months with Iridium CloudConnect and Amazon EventBridge

Paco Gonzalez

Sr. Specialist Solutions Architect, IoT

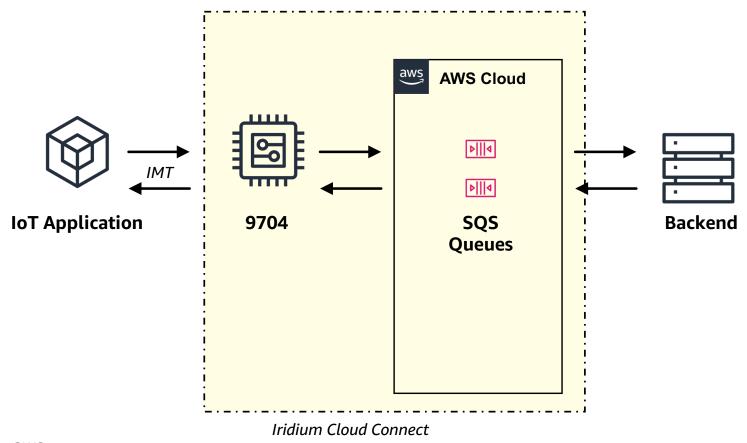

AWS FOR IOT

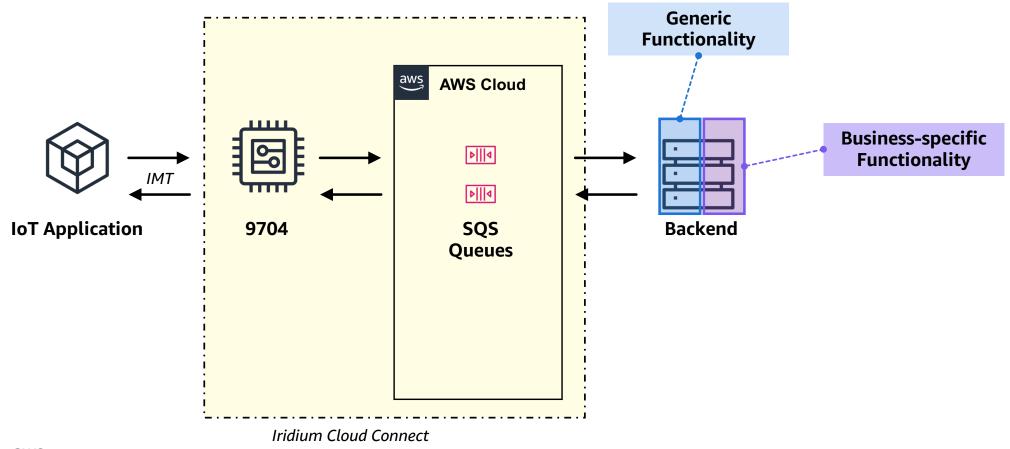

Session Objectives

- 1. Basic architecture overview
- 2. Using AWS services to enable basic messaging functionality and AWS developer tools to automate infrastructure deployments
- 3. Integration walkthrough

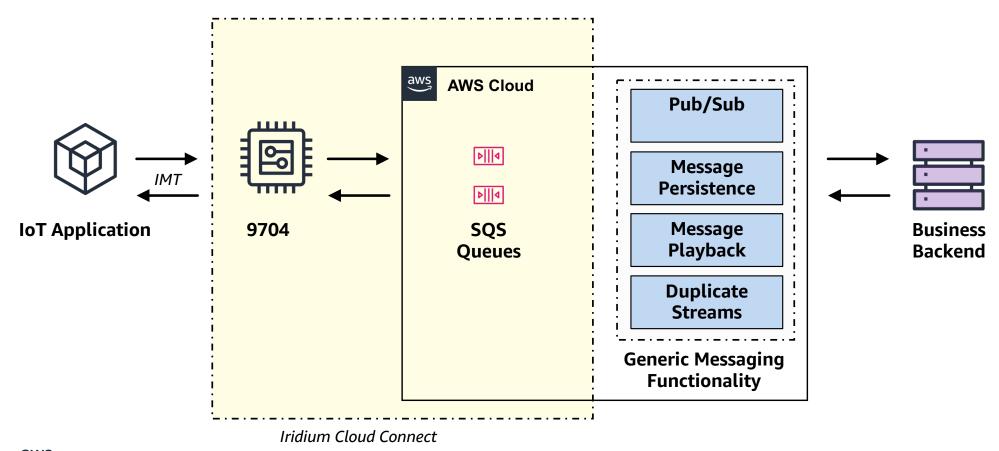

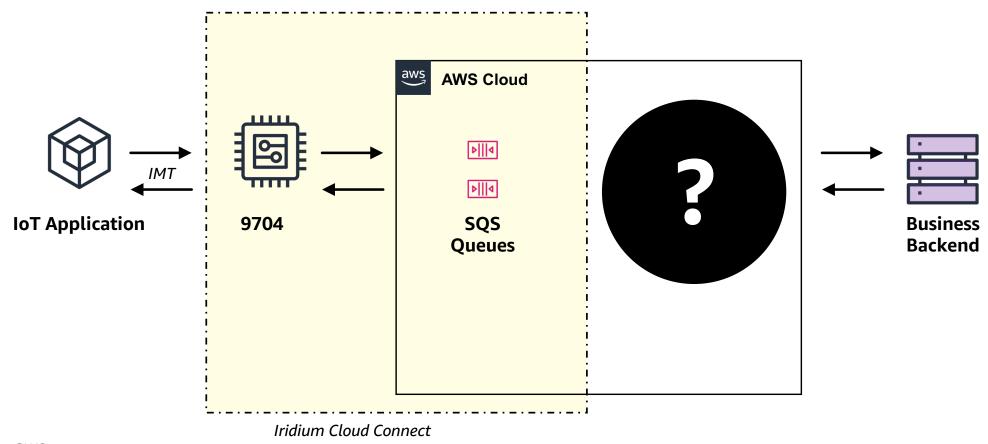

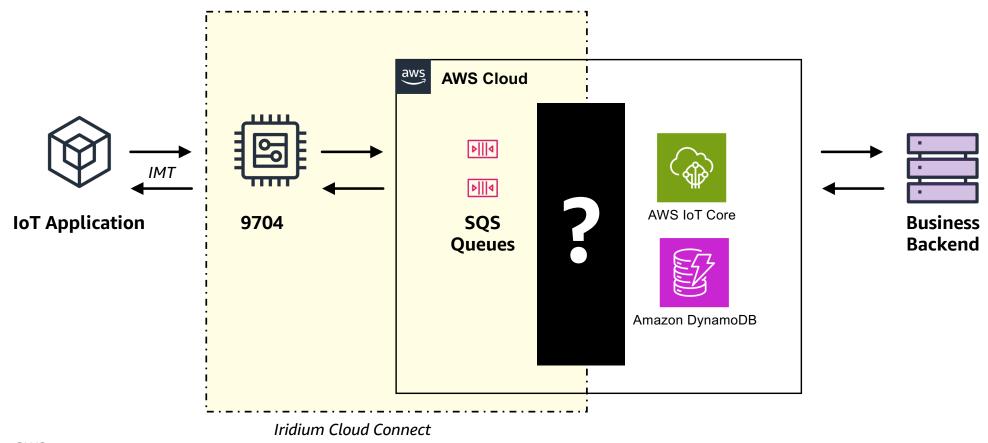

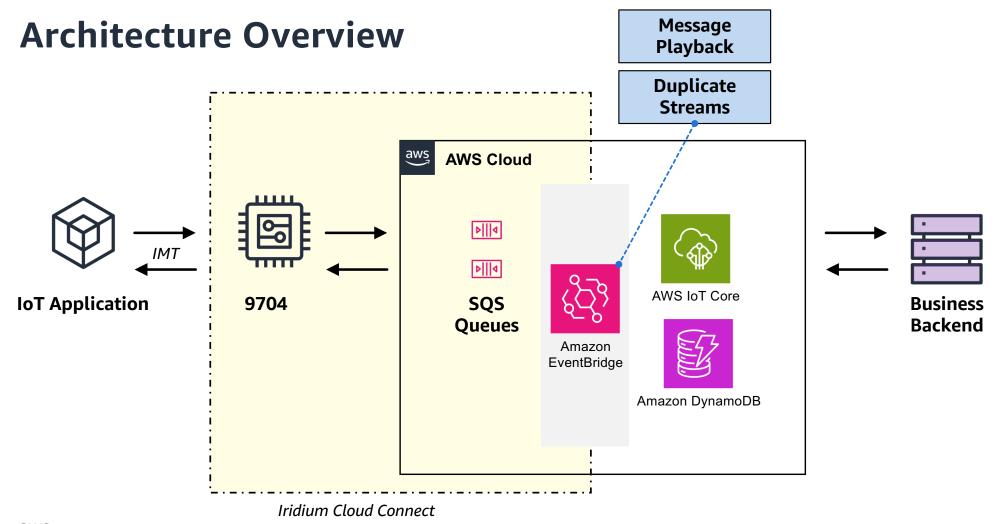

Pub/Sub **Architecture Overview AWS Cloud** IMT AWS IoT Core **IoT Application** 9704 SQS **Business Backend** Queues Amazon DynamoDB Message Persistence Iridium Cloud Connect

STATUS

AWS FOR IOT

Wrap-up

Takeaways

- AWS Building blocks like AWS IoT Core, Amazon DynamoDB and Amazon EventBridge can be used together to run an easy to maintain generic backend suitable for IMT
- The AWS Cloud Development Kit (CDK) defines your cloud application resources using familiar programming languages
- Amazon EventBridge is a serverless event-bus service that enables IMT users to quickly and easily integrate applications, services and data across multiple environments

Wrap-up

Takeaways

- AWS Building blocks like AWS IoT Core, Amazon DynamoDB and Amazon EventBridge can be
 used together to run an easy to maintain generic backend suitable for IMT
- The AWS Cloud Development Kit (CDK) defines your cloud application resources using familiar programming languages
- Amazon EventBridge is a serverless event-bus service that enables IMT users to quickly and easily integrate applications, services and data across multiple environments
